

Jishu Ghosh

Full Stack Developer & Creative Technologist

Email: jishughosh698@gmail.com | GitHub: github.com/JISHU-GHOSH | Location: India

PROFILE & PHILOSOPHY

High-velocity Full Stack Developer and creative builder operating at the intersection of aesthetic intuition, rapid flow-state execution, and strong computational foundations. Experienced in harnessing modern AI agentic workflows to translate raw vision into fluid, production-grade applications across healthcare AI, quantitative finance, and high-performance interactive graphics.

CORE LANGUAGES & TECHNICAL STACK

Languages:	Python, C++, C, JavaScript (ESNext), HTML5, CSS3, TypeScript, SQL
Frontend & UI:	React 19, HTML5 Canvas (60 FPS), WebGL, Vite, Tailwind CSS, Spring Physics Motion
Backend & APIs:	FastAPI, Node.js, Express, WebSockets, RESTful APIs, Web Speech API (TTS & STT)
Databases & Tools:	DuckDB, SQLite, PostgreSQL, Redis, OpenCV, Docker, Git, GitHub Actions

FEATURED PROJECTS

Memory Companion (Xubhodaya) — AI Dementia Cognitive Care Platform

Smart India Hackathon (SIH 2026) | Python, FastAPI, SQLite, React, Vite, Tailwind CSS

- Engineered a digital therapeutic platform providing non-punitive 3-step progressive hint scaffolding and voice recognition.
- Implemented pointer-event micro-telemetry measuring touch dwell duration (ms) to detect early psychomotor stiffness and tremors.

News-Driven Quantitative Prediction Engine

Quantitative Systems Collaboration with Hridesh Joshi | Python, DuckDB, FastAPI, React 19

- Built an institutional-grade alpha generation engine integrating causal temporal decay kernels and Bayesian game-theoretic stress testing.
- Implemented microstructural Smart Order Router (SOR) and real-time WebGL/Canvas financial research terminal HUD.

MIOS (Marketing Intelligence OS)

Knowledge & Experimentation OS | Next.js (App Router), React, TypeScript, Supabase, Tailwind

- Developed a centralized platform converting daily marketing campaign activity and A/B experiments into compounding institutional knowledge.
- Implemented relational schema on Supabase and structured psychological customer profile repositories.

Interactive 3D Cursor Character Portfolio

Creative Technology Showcase | React 19, HTML5 Canvas 60 FPS, Python OpenCV Inpainting, Vite

- Architected a zero-ghosting 60 FPS Canvas head-tracking engine with circular angular lerping, deadzone eye contact, and spring physics.
- Pre-extracted and OpenCV-inpainted 64 sequential WebP rotational frames with under 5MB total memory footprint.

EDUCATION

Bachelor of Technology in Computer Science & Engineering

2022 – 2026 | Core: Data Structures & Algorithms, C++, Operating Systems, Database Management Systems
